

URBAN CONCEPT

The visualization of our urban design concept lies mainly in the idea of continuous re-birth and re-productivity. How can agriculture while integrated through various parts of our community play the role of bringing people together, provide jobs, aid economy and set an example for future generations.

PLANT TRANSFORMATION

Phase 1: Branch anatomy Studies
Phase 2: Possibility of application
Phase 3: Projecting and imitation with urban vocabulary
Phase 4: Integration of urban agriculture.

The main street is the branch; primary circulation and services route. Subsidiary streets divide zones according to function, privacy and agricultural usage. The borders of this urban community end with agricultural farms and gardens, and that's where the concept comes to life. Re-birth and re-productivity will always start and go back to our agricultural soil. This captures the image of life in a full cycle.

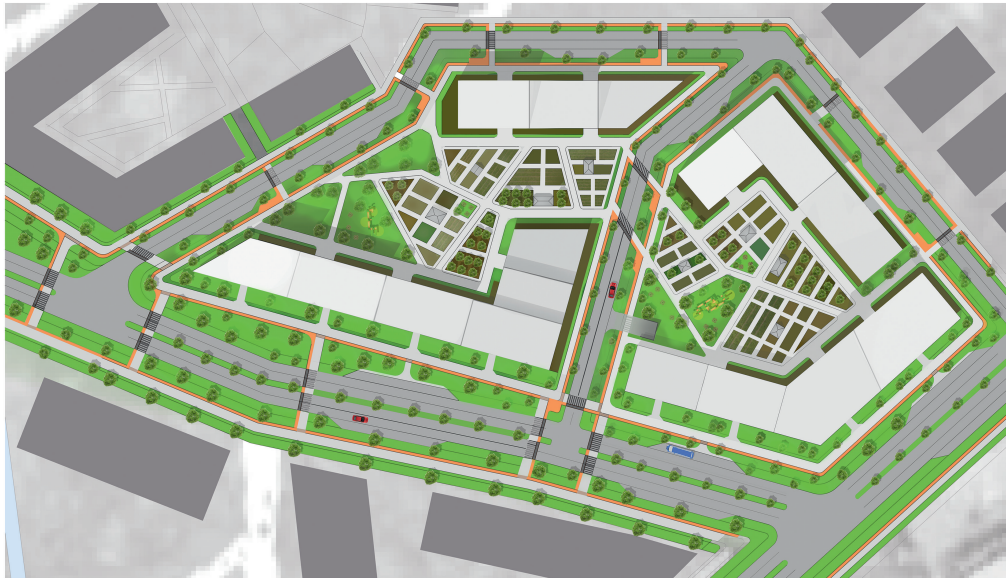

FUNCTIONS KEY MASTER PLAN SCALE 1:2000
