

YBL IN BETWEEN : COMMUNITY AND URBAN PLANNING

Ybl Miklós Faculty of Architecture And Civil Engineering, Community and Urban Planning The Budapest Project, »City 4.0: Smart, Green and SUB-ECO« Prof. Holm Kleinmann, emer.

Members of the creative group: Meryem Kahya , Fawz Belhadj , Andres Pascuas

URBAN CONCEPT

The objective:
Organize the place given in an efficient urban environment that provides transport accessibility, green landscapes, pedestrian and vehicular connections. Creating building development with agricultural zones that can contribute to the design of the sustainable city of the future.

Our idea:
Inspired by an urban agriculture belt axis that connects two sides of the plot, with an organic shape, we start to generate a city structure in both sides of the belt, making the urban planning a rich rural view, surrounded by buildings with different highs to maintain the access of light in a central place, but also with residential zones in exteriors to create balance in functions, in that way we are creating a dynamic concept of activities for visitors and residents.

URBAN CONCEPT

One of the main points of the master plan is eliminating the need to use car instead of that, we promote the use of public transport and walking green paths. Areas including schools, offices, commerce, arts and culture are also contemplated in our concept as a desire to live in communities that provide a range of social access while offering the peace of an agricultural context.
